

Extended Validation SSL

GlobalSign ExtendedSSL Certificates

New Security Standards in SSL help make SSL a Competitive Advantage

The last few years have seen an unprecedented increase in fraudulent web sites and phishing attacks. In 2005 the leading Certification Authorities and Browser vendors came together and formed the CAB Forum - a membership body designed to standardize issuance procedures of future SSL certificates.

In January 2007 the browser vendor forum members will start to release enhanced versions of their browsers – new browsers capable of identifying which SSL certificates are the new "Extended Validation" (EV) certificates. These next generation browsers activate the new green user interface to show web site visitors when they encounter an Extended Validation certificate, resulting in added trust and peace of mind the web site they are dealing with is authentic and legitimate.

The EV Certificate activates the new green interface and the padlock area now alternates between your company name and country and the Issuing Authority - namely the credible and long time established GlobalSign.

What is the vetting process?

The Extended Validation vetting process establishes the legitimacy of an organization within a specific jurisdiction of incorporation. It also clearly identifies the organizations principle place of business through a rigorous and stringent set of well defined validation processes. The process encompasses authentication of the organizations domain ownership rights as well as contractually binding the organization to a subscriber agreement which benefits relying parties and strengthens the security of the Internet as a whole.

ExtendedSSL

The GlobalSign Difference

- Activate the Extended Validation support in new browsers such as IE7, Opera, Firefox, Chrome and Safari
- Turns the address bar Green and clearly shows your Company Name to let your visitors know you have been vetted to the new, standardized high standards
- ExtendedSSL Site Seal
- AutoEV™ technology to maximize the number of "Green Bars" seen by visitors – automatically updates XP SP2 users to support the EV browser interface enhancements
- £250,000 underwritten warranty

SGC Enabled by Default – no extra charges

- Vista & XP SP2 users see the green bar
- All other users receive 128 to 256 bit encryption
- Legacy browsers (IE 4.723612.1713 and above) will be stepped up from 40 bit to strong 128 bit

Why should my company use EV SSL

- Protect your customer's accounts from phishing attacks - any web site that give their customers accounts is a potential phishing target
- Protect your brand from copy cat web sites - ensure customers know the site claiming to be you really is you
- Elevate your site image - position your brand against the big brands, thousands of which have already adopted EV SSL

Who is eligible for EV SSL?

EV certificates are available to Private Organizations, Government Entities, Business entities and non commercial entities such as International Organizations as defined within the CAB Forum EV certificate guidelines.

Can I renew my current standard GlobalSign SSL with EV SSL?

Yes, and as a current GlobalSign customer you get a special loyalty price – contact EV SSL Sales immediately to get your money off coupon.

Can I switch from a competitor's SSL Certificate to GlobalSign EV SSL?

Yes, plus you get a special "switch" price and we'll add the remaining time on your current SSL Certificate onto the new EV SSL Certificate. We'll also add another 30 bonus days free of charge! Contact EV SSL Sales immediately to get your "switch" money off coupon.

GlobalSign ExtendedSSL	
EV Legitimacy	Member of CA/B Forum
